Rent a Fence Pty Ltd acknowledges the close relationship it has with its clients. Rent a Fence Pty Ltd actively works with them to pursue the highest standards and strive for their commitment to the awareness of environmental standards which reflects the intent of this policy.

To achieve its goal Rent a Fence Pty Ltd has adopted the following initiatives to ensure reduction of environmental impacts:

- Water tanks - manufactured out of recycled material at own in-house plastic plant and used throughout factories and offices to reduce water consumption.
- Recycling – all consumable waste is recycled in various forms.
- Paper – recycled by office staff for notepads or other uses.
- Waste - general waste is placed in waste bins whilst other waste is placed in hazardous waste bins and both are removed weekly by local service providers.
- Hi Visibility Block – 100% recycled. The plastic shell is stripped from the concrete block and the plastic is then reground and reused. The broken concrete is then put into a waste bin and sent to a local concrete crushing plant to be recycled into road base.
- Fence Panels – if useable the mesh is cut into 150mm high strips and made into dog proofing. Any unusable mesh, clamps, nuts or bolts are placed into metal recycling bins and removed by the local recycling contractors.
- Plastic Water Barriers – once damaged, they are cut up, re-ground, and reused to make other plastic products.
- Plastic Hoarding Sheets (Polyethylene) – are made from 100% recycled material.
- Portable Toilets – the fresh water flush toilets have a 390 litre waste capacity.
- Transport/Logistics – all Company vehicles are fitted with a GPS tracking system which allows for a reduction of fuel emissions, efficiently monitor kilometres, fuel usage and general wear and tear. This system also provides the facility of maintenance program and reporting. Six tonne trucks with 6.5m flat top trays are used with a weight bearing capacity of 200m per load thus reducing the number of trips required to complete jobs. An ergonomics report has been commissioned confirming that from a Workplace Health and Safety perspective it is better for the staff to drive a 6 tonne truck. Each truck is fitted with a custom made trolley, tailgate loaders and side lifters to reduce the impacts of manual handling.
